## Botulinum Toxin Automatic Injector

### Intended Use

Talent BT™ is an automatic single button pharmaceutical injection device developed to allow a safer, faster and repeatable dose delivery for botulinum toxin injections.

### Safer

Talent BT™ innovative patented technology makes it possible to control the precision and repeatability of the dose simply and comfortably. Talent BT™ increases the success rate by removing the risks common to unit dosage and dosage symmetry.

### Faster

Talent BT™ automatic single button operation allows a faster treatment. Needle-based treatments are not comfortable for the patient and at Primequal we think it is important to be able to reduce the overall time of treatment for patient comfort.

### Higher performances

Dose precision concerns are ensured by the Talent BT™ patented system allowing the practitioner to concentrate fully on the treatment and to perform in his injection skills as never before.

### All Dilutions, All Toxins

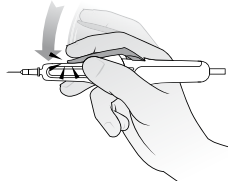

Talent BT™ can be used with all Botulinum Toxins available and with any type of dilution. Talent BT™ is similar to a 0.5 ml standard syringe and therefore does not change the practitioner's usual method.

### AutomInject™

AutomInject™ patented technology allows the Talent BT™ to deliver a precise dose each time you press on the lever. It has a fully automatic dose per dose delivery from the first to the last dose.

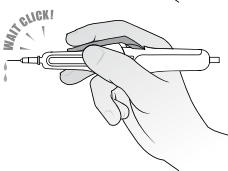

AutomInject™ produces a « click » sound after every dose, allowing the practitioner to effectively monitor the correct dosage: **1 click = 1 dose**. The treatment is thus greatly simplified to a click based procedure.

1

**PRESS**  
Firmly press the lever as far as the stop.

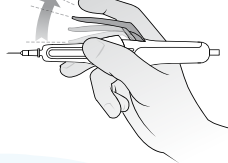

2

**WAIT**  
Keep the lever pressed until one dose has flown through.

1 click 1 dose

3

**RELOAD**  
Remove finger from the lever.

### Press and Wait

To take full advantage of the AutomInject™ patented system, 1 firmly press the lever all the way down. 2 Keep the lever pressed and wait while the dose is automatically released. 3 Release the lever after hearing a click.

1 click = 1 dose = 0,01 ml = 10 µl.

### No training required

AutomInject™ allows practitioners to **perform right from day one an injection without any training**, saving time and money and providing increased comfort to themselves and their patients.

### Practitioner Satisfaction

Talent BT™ is a wrist-manipulated device that has been especially designed to reduce arm weariness. Talent BT™ is intended to increase comfort and possibilities of use while greatly reducing known risks of dosage. Talent BT™ is the most advanced and safest technology for botulinum toxin injections.

### Patient Satisfaction

Talent BT™ is based on the latest technology used in the pharmaceutical industry to provide a safer and faster injection. While increasing the quality and the regularity of the treatment, it also reduces the injection time and pain which is most welcome for patient comfort.

### Proven concept and design

Talent BT™ is based on the multi award winning Preciquant™ technology. Preciquant™ technology is used to provide painless injection to children, metered dosing for specific injections and pharmaceutical drug delivery.

Talent BT™ is a single use and disposable automatic syringe for botulinum toxin injections. Standard and regulatory references: European Directive 93 / 42 / EEC, ISO Standard 13485 and ISO Standard 14971. The manufacturer reserves the right to modify the product without prior notice. AutomInject™ 1 Click 1 Dose™ and Talent BT™ are Trademarks of Primequal SA, all rights reserved.
